

PFC电路分析：VCC2供电给U301后输出驱动方波给QW3，使QW3导通、D303截止，LP1储存能量，根据输出功率大小即对应的U301 PIN1（FB）电位大小，由限流电阻R302感应到电位达到限流值时关断QW3，LP1能量通过D303给大电容CE2充电，当LP1给CE2充电电流减小到零电流时，U301的 PIN5感应到后使QW3导通，进入下一工作周期。
